

DAPP Incubator Ecosystem

High ROI DeFi Application

Secure . Transparent . Trusted

What is DAppIncubator?

DAppIncubator is an autonomous decentralized exchange smart contract deployed on the Ethereum blockchain which provides a secure way of generating passive income by providing a high return on investment.

The DAppIncubator smart contract manages all blockchain transactions in real time without any third party intervention. These transactions include buying tokens, selling tokens, withdrawal, reinvestment, distribution of dividends and defines the price of tokens etc.

DAppIncubator generates income to users in multiple ways which includes increase in invested assets value, increase in purchased token price, earning dividends on token holdings etc.

How Does DAppIncubator Work?

DAppIncubator works on below factors:

1. Ethereum & ERC-20 Tokens Asset
2. Initial Price
3. Increment Price
4. Network Fees
5. Token Minting & Burning
6. Dividend Per Share
7. Referral Dividend

Ethereum & ERC-20 Tokens Asset

Ethereum and ERC-20 tokens asset are an important part of the DAppIncubator system.

Users need to invest (send) Ethereum or ERC-20 Tokens to the DAppIncubator smart contract using website or by calling the invest function via blockchain.

By sending Ethereum and ERC-20 Tokens the smart contract will mint D<Token> against investment. For Ethereum the system will mint DETH for USDT. The system will mint DUSDT.

The price of each minted token is determined based on predefined initial price and increment price which is discussed in the next slide.

Initial Price

Initial Price is the price at which the first token gets minted on deposit of crypto assets. The initial Price for each asset will be different and set by system while enrolling new asset. Example: The initial price of the first minted token for Ethereum is different from the initial price of first minted token for TUSD.

Increment Amount

The increment amount is an incremental/decremental factor of the token price when the user buys or sells the token. For every new minted token the price is incremented by the incremental factor above the previously minted token price. Similarly, for every token sold the price of the token decrements by the mentioned increment price factor.

Network Fees

For every investment and sell transaction 10% of transaction amount is deducted as network fees. This fee is used to pay dividends to successive investors who are holding tokens in the system. If user is buying using ETH then 10% of deducted fees will be distributed proportionally among DETH holders as dividends.

Token Minting & Burning

The DAppIncubator system doesn't have fixed tokens. The number of tokens is decided by users while purchasing and selling. Whenever users invest in the system new tokens get generated and when users sell tokens, equivalent tokens get burned from the system. In this way only the investor holds tokens and no additional tokens are needed for admin use.

Dividends Per Share

Dividends Per Share is paid as ROI for holding tokens in the system. This dividend is distributed from network fees deducted while investing or selling to keep system alive. 10% of network fees is distributed among previous holders in proportion to their holding ratio.

Referral Benefits

DAppIncubator provides 3.33% of investment as referral bonus which is equivalent to 33.33% of network fees deducted.

Referral link format is as below:

https://dappincubator.com/?ref=<ETH_Address>

The screenshot displays a web interface for a DAPP Incubator Exchange. It features a grid of information cards and input fields. Annotations with white lines point to various elements, explaining their function. The interface includes dropdown menus for selecting the coin/token name and fiat currency. It shows wallet balances, current token prices, token symbols, supplies, and balances in both ETH and USD. It also displays dividend and referral information, along with buy and sell price cards. At the bottom, there are input fields for the amount to invest or sell, and buttons to execute the transactions. The background is a dark blue with a subtle pattern of white dots.

Coin/Token Name	Ethereum (ETH)	Fiat Currency	USD - United State Dollar		
Wallet Balance	0.059234379746768366	Price of Ethereum (ETH)	1801.9 USD		
Token Symbol	0.00000000 ETH 0.00000000 USD	Token Supply	0.00000000 DETH	Your Token Balance	0.00000000 DETH 0.00000000 USD
Dividend	0.00000000 ETH 0.00000000 USD	Referral	0.00000000 ETH 0.00000000 USD	Combined Dividend	0.00000000 ETH 0.00000000 USD
Buy Price	0.00000011 ETH 0.00019821 USD	Sell Price	0.00000009 ETH 0.00015217 USD		
Amount To Invest	Enter Amount of ETH to Invest	Amount To Sell	Enter Amount of DETH Token to Sell		

Annotations:

- Your Wallet Balance
- Current token price
- Your total DETH wallet balance
- Contract total token supply
- Your total combined dividends
- Your total referral bonuses
- The current sell price
- Your chosen amount to sell
- Click to sell
- Click to buy
- Current buy price
- Your chosen amount to invest
- Equivalent USD value
- Total dividends received
- Equivalent USD value
